

DATA SHEET

DIPLOMAT MFT

BASIC EDITION

OVERVIEW

When you need to securely send files to a few trading partners or receive files from them, Diplomat MFT Basic Edition lets you automate secure FTP and OpenPGP encryption/decryption in a single job. You can create automated jobs that PGP-encrypt files and send them to FTP, FTPS or SFTP servers without any programming expertise or special skills.

JOB SET-UP

You don't have time to learn new tools. You need to focus on your business – rather than worry about batch scripts or job scheduler syntax. With Diplomat MFT Basic Edition, you can set up, test, and schedule file transfer jobs with an intuitive point-and-click user interface. No programming or other special skills are required.

Diplomat MFT Basic Edition lets you address file transfer and PGP encryption with a single solution. If your business partner requires PGP encryption, Diplomat MFT Basic Edition can PGP-encrypt files before sending them to your partner's secure FTP server or decrypt files picked up from the FTP server before writing them to your local network.

You need to protect your data and your partners' data at all times – in transit and at rest. Diplomat MFT Basic Edition has OpenPGP encryption to protect files at rest and secure FTP to protect data in transit.

Diplomat MFT Basic Edition lets you set up file transfer jobs to:

- ❖ Move files to or from secure FTP servers
- ❖ PGP encrypt, decrypt, sign or verify files
- ❖ Overwrite existing files
- ❖ Delete source files
- ❖ Fail jobs if no files are found
- ❖ Use wildcards to identify source files
- ❖ Rename files during transfer

JOB AUTOMATION

You can use Diplomat MFT's built-in scheduler to schedule transfers to or from FTP, FTPS or SFTP servers and internal network locations. You can schedule file transfer jobs to move files to or from secure FTP servers by minutes, hours, daily or monthly. With no manual intervention, you get fewer file transfer errors. Plus, you can execute ad hoc jobs to immediately pick up or drop off files on secure FTP servers.

ENCRYPTION

Your secure file transfer solution needs to operate seamlessly with your partners' current applications. Diplomat MFT works with existing technologies by using industry standards, such as OpenPGP and secure FTP.

Your business partners can continue to use the encryption and file transfer products they have in place. You can create OpenPGP keys or, if you already have OpenPGP keys or key rings, they can be imported into the Diplomat database for use whenever OpenPGP encryption, decryption, signing or verification is needed.

FEWER FAILURES

Successful file transfers rely on your internal network, internet connection and the source and destination sites being available. A small 'glitch' in any of these systems can cause file transfers to fail.

File transfer failures are usually prevented when using Diplomat Managed File Transfer. When a transient error occurs, like a dropped FTP session, Diplomat MFT automatically attempts to recover and complete the transfer. Most transient file transfer problems are corrected such that a file transfer job succeeds on its first run.

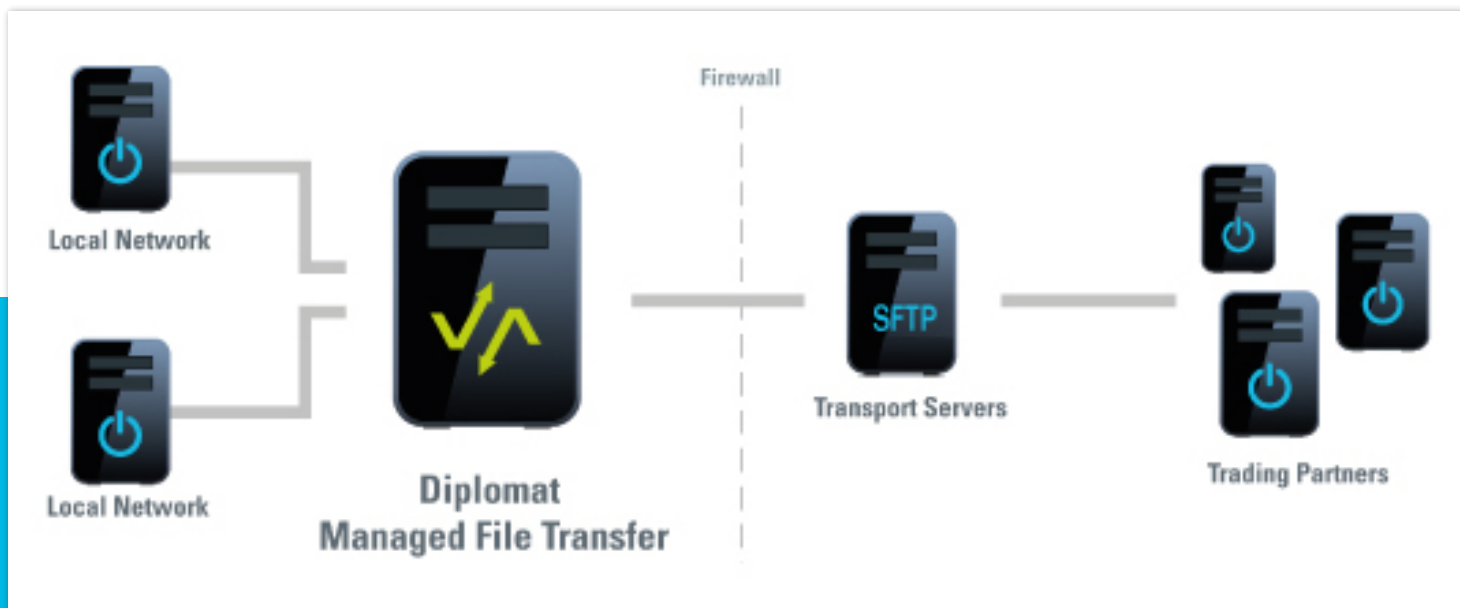

PROBLEM RESOLUTION

When attempting to transfer files, unexpected problems can crop up. You might have outdated FTP account login information. Files might not be ready for pickup. The wrong key might have been used to encrypt a file, so you cannot decrypt it. When you use Diplomat MFT, these file transfer problems don't become business problems.

Diplomat MFT Basic Edition offers extensive troubleshooting tools to ensure faster problem diagnosis and resolution, so your files arrive on time and ready to use.

Set-up and run-time events are written to a log file. The built-in log viewer makes it easy to locate and view only the log entries you need to diagnose a problem. And, you can turn on advanced troubleshooting to capture more data, such as temporary files, to pinpoint the source of a problem.

Diplomat MFT Basic Edition

DATA RECOVERY

Sometimes you may need to resend a file because a business partner deleted a file before it was processed. Diplomat MFT Basic Edition automatically archives each file you send or receive for 30 days. You have a copy on hand for your own records or to resend to a partner. And, after 30 days, Diplomat MFT deletes the archived files, so no manual clean-up is required.
